"These models are the importance seeds to create values and changes not only in the society but in our organization."

Suphachai Chearavanont
Chief Executive Officer
Charoen Pokphand Group Co., Ltd.
March 12, 2019

Award Story

Over a hundred year in business, Charoen Pokphand Group has operated the business on the "3 benefits" values basis , the group of business operations must benefit to every country where invested, to the people and lastly to the organization, employees, executives and stakeholders who are considered as key foundation for the organization's growth and progress. Moreover, participated in economy and social development without only aiming for business benefits but conscience for common good embedded in the DNA of more than 350,000 CP employees around the world. This is a powerful force to join to do good deeds and be a part of sharing benefits to communities and society.

In the past, the Charoen Pokphand Group and the employees have undertaken projects to help and solve many social problems. On this occasion, the Charoen Pokphand Group has founded CP for Sustainability Project to select projects that benefit or help solve problems (or Pain Point) of the society or community which can be lead to sustainably participation and to praise employees who have undertaken those projects and lead those projects as a driving model in the future.

Dr. Pearmsak Makarabhirom, Ph.D

Consultant : Institute of Human Rights and Peace StudiesMahidol Unversity

"I appreciate the Charoen Pokphand Group that give opportunity to the employees to create truly benefits for people in the country along with the sustainable growth of the business."

I found the CP employees' intention in their projects which are deeply benefit in several sustainability dimension. For example; in the aspect of education, there are projects that provide skill development, train people in the community to be able to bring knowledge to develop, create jobs, and create careers. As well as more emphasize on improving the quality of life of the disable and underprivileged people. Furthermore, there is systematic thinking in the overseas projects, and projects are developed by integrating education, technology, and agriculture.

Dr. Pipat Yodprudtikan

The Director of Thaipat Institute

"Most of the projects submitted increasingly consider the benefits throughout the supply chain from upstream to downstream which is good and admirable."

In sustainability issue, we must consider the importance of internal and external stakeholder which is an important matter in operating business under the principle of sustainability. In addition, there are more projects from business groups overseas which is unique to each country. It shows the importance of CP Group to invest and make benefit to people in that country for a better quality of life.

Boonlarp Poosuwan

Founder / Executive Editor thaipublica.org

" CP Group have done the projects not only for the community level but for the benefit of the whole country to be sustainability in every dimension."

This year, the projects have varied from community-level projects as a form of CSR up to the projects which create sustainability to nations with the cooperation between the CP Group and the government. Moreover, most of the projects are continuing and accordance with the implications of sustainability and they create benefit to society effectively.

Create jobs and careers

Encourage the creation of jobs for everyone who needs it, such as small farmers, SMEs, and vulnerable populations, in order to improve well-being and help communities grow stronger and more sustainably.

7-11 Siding with Thai Farmers

CP ALL Public Company Limited

create jobs for people

1,600 people

Generate income for the family farmers

374 million baht

Agricultural sector is the foundation of Thailand's food security but falling price and oversupply are problems due to unstable market, lack of price guarantee, lack of farmer union, lack of bargaining power, extortion by the middlemen, and lack of knowledge about product processing to increase value.

Establish a sale channel for the farmers during oversuppoy, eliminate the middlemen to increase farmer income, increase number of regional buyers. By Grouping of the troubled farmers, creation of additional buyers, production planning and price guarantee, distribution of vegetable/fruit production and packaging factories (Community Enterprise, Cooperation, SMEs) to regions and pushing for GMP certification, introduction of post-harvest innovation and designing of specific agricultural prodcuts to increase product value and meet customer needs.

This project boosts income and security for farming families in the community as follows: 1,232 of families of banana farmers (20,472 rai of plantation area), 250 families of seasonal fruit farmers (5,678 rai of plantation area), 358 families of fresh-cut fruit farmers (12,255 rai of plantation area), 23 families of fresh vegetable farmers (369 rai). Total area of plantation is 41,778 rai and the total number of families is 1,863.

8 DECENT WORK AND ECONOMIC GROWTH

Future Career Preparation for Trainee Project

CP ALL Public Company Limited.

"Students have gained work experience and earned income to help relieve family burdens totaling more than" 4.91 billion baht/year (Since 2009 to 2020)

To provide opportunities for students from various educational institutions to gain work experience in order to prepare them for careers in business administration and retail management. As a result, students have improved their presentation skills, adaptability to work with others, life discipline, and gratitude. Include the possibility to develop a job that allows students to earn money while they are interning. A total of 37,257 students participated in the initiative from 2009 to 2020.

Increase the Fisher Women Income by drying their fishes using Solar Dryer Tunnel

CPF (INDIA) PRIVATE LIMITED

The Thupilapalem village is a fishermen community village,Rural Fisher women face severe financial crisis with the traditional ways of drying fish and other factors like Weather conditions,Rodents are affecting the quality of Dryfish. Market and production capacity of the Dry Fish is low due to the unhygenic ways of drying fish which is dried in open area (Traditional Method) and it ultimatly affecting the livelihood of Fishermen community.

To enhance and develop the income for Rural Fisher women communities by providing them the required infrastructure to improve their income levels by pro ducing Supreme Quality of Dry fish and helps them in getting high yield with usage of modern technol ogy to increase the market value for Dry fish.

Normally Fishermen start drying fish while on the boat itself. Once the fish landed, it takes a couple of days to process the dry fish.If processed properly, the fish can last for more days . But because of the incessant rainfall and a lack of proper storage facilities in the village, all the produced dry fish get spoiled.

By using Solar Fish dryer, fishes will be dries quickly when compared to traditional method and hygine is also ensured.Generally, they sell salmon, snapper, varieties of prawn and other dry fishes at Rs 300 to Rs 800 per kilo in the market,now they get 20% to 30% hike per kilo.

Benefits 1.Speed drying process with Hygiene Quality. Earlier by natural source in open sunlight the production yield in 8 hrs was 25 kgs, but now using solar dryer tunnel the production yield is 100 kg/day.

3.Increased the income level from 300 to 450 rupees/ day and raised the standard of living of the women fisher women.

4.It ensures hygiene making process in dry fish product by using Modern Technology (Solar Tunnel Dryer).

Heart of hearing

CP ALL Public Company Limited.

"Transfer knowledge, reducing the disparity among hearing impaired children by building a career, earn money, and extend skills to a professional barista."

Our team has skills and knowledge about the coffee profession. Therefore we need to share knowledge with this group of people to reduce inequality in society by looking for a target audience from this group.Earlier, We only choose children in the department of juvenile observation and protection. This time, the team extends the project by selecting a group of children who are hearing impaired because they have artistic skills, resolution and kindness. That is the basis for being a good barista.

Program objectives to provide educational opportunities and ready to promote the professional barista, expand opportunities as well as develop coffee skills to a professional barista for hearing impaired and reduce inequality in society. The team recognizes the importance of children with hearing impairments therefore CP ALL has collaborated with the Taiwan Ministry of Tourism Bangkok by coordinating with 4 schools for the hearing impaired.

CP ALL created the coffee classroom project by training basic coffee skills for a short course. Our lecturer knowledge about coffee and be able to create a special drink. Our speakers are coffee specialist with over 20 years of experience in the coffee industry and they are team-leading organizing national competitions of brewers in the sign language world to be a professional barista under the named "Young Barista camp"

The team winners of this stage will get a field trip to Taiwan for an opportunity for young people to learn how to make coffee from a world-class professional barista in Taipei.

It also encourages team winners who get a field trip to Taiwan to value themselves and continue to inspire others in their groups. It not only the field trip opportunity but also support from the team to get more potential to compete for the coffee competition for more opportunities in barista career.

Development of Domestic Distribution Bussiness for Sustaiability of Community -Case Study of Om Payod Betta Fish Culture Community Enterprise

CP ALL Public Company Limited

Generate income for the community enterprises

188,450 Bath./month

Om Payod Betta Fish Culture Community Enterprise, where located in Nakorn Pathom province, faced the difficulties of exportation of betta fish to overseas customers according to flight cancellation and the lockdown of foreign countries caused by the pandemic of coronavirus (COVID-19). Each member of this community enterprise lost the monthly income around 50,000 baht due to the international market were sole distribution channel of the community enterprise.

To develop new brand and new domestic distribution channel for betta fish and its related products by using online and offline marketing strategy.

Develop the new products that increase the utility of betta fish in daily lifestyle. Establish the betta academy for sharing the knowledge with the stakeholders.

From the problems within the community enterprise, academic staffs and 4th years student of faculty of innovative agricultural management under the support of Government Savings Bank were set up the meetings with the members of the community enterprise to reflect and consider the suitable solutions that were fit with the potential and contexts of the community. Initially, a new domestic brand, "The Sakana Ville" was established to distribute betta fish and its related products. Then, the strategic marketing plan and the suitable characteristics of the products were defined by using marketing tool. A ready to use Indian almond leaves and a betta fish set that utilized as kid's learning media were developed to increase the utility of betta fish in daily lifestyle. Next, the offline and online distribution channels were developed and implemented to sell the products through website and social media. Finally, the first betta academy in the world were established by community enterprise and its networks for sharing the knowledge about betta fish with the stakeholders. Benefit, new domestic brand and new domestic distribution channels were developed.

Four new products that concerned with the utility of betta fish in daily lifestyle were developed.

The community enterprise received the income around 188,450 baht/month.

8 DECENT WORK AND ECONOMIC GROWTH

Fish Aggregating Devices (FADs)

for sustainability : social innovation for profitable conservation from the Gulf of Thailand to Andaman Sea.

Charoen Pokphand Group Co., Ltd.

Community income
5.2 million baht/year

98,000
Baht/year/household

Due to overexploitation and irresponsible fishing around "Ao Na Thong" or Na Thong Bay, Baan Koh Petch, Hua-sai, Nakhon Si Thammarat, marine resources had been severely depleted, causing local fishers to either switch thier jobs or move out of the community to find new jobs.

In order to solve these problems, people in the Baan Koh Petch community gathered and formed the "Hua-sai Local Fishery Association" aiming to protect and rehabilitate marine and coastal resources in their areas. Their activities include crab bank implementation, and creating artificial reef, Fish Aggregating Devices (FADs), etc. Later on, CP's Community Relations Team joined hands with the Baan Koh Petch's fishing community and the association to run conservation and rehabilitation projects as well as conducting R&D projects on re-used Fish Aggregating Devices (FADs)" as a way to improve fisheries production and sustainable conservation.

Project Purpose To develop new "Fish Aggregating Devices (FADs)" management which is profitable and reusable. To rehabilitate, protect and increase marine resources. To create food security while helping the local community increasing their incomes. To create networks and participation of Thai marine's fisherfolk.

Held a community forum for collective opinions on identifying a protected area for FADs implementation. (400 m. from coastline)

Co-designed on a new FADs. Originally, there were two types of FADs (one made from coconut branches, the other from ropes). However, based on observation, FADs made from coconut branches have attracted more fishes that those made from ropes, but they have a shorter service life. Thus, a new design of FADs was created from integrating the two types of FADs.

The innovation of reusable and profitable "Fish Aggregating Device (FADs)". The local conservation area of 800,000 sq. m.

Two networks of Andaman Sea fishery community and Ao Thai (The Gulf of Thailand) fishery community and participation of 150 Thai marine's fisherfolk.

8 DECENT WORK AND ECONOMIC GROWTH

Mae Chaem Natural Safety Project Project : Mae Pan-San Kieng Model

Charoen Pokphand Produce Co.,Ltd.

Community enterprise have total income 15.8 million baht

Farmers in Mae Chaem District Chiang Mai province grows corn as a staple crop because it is a short-lived crop with high yields and has a buying market.But because it is steep and out of irrigated areas, when farmers need more income, it leads to encroachment of forests to expand the arable area to meet the income they need. And it is the cause of the increasingly serious haze problem in Mae Chaem area. In addition, expansion of corn planting area has caused soil degradation and water shortage for cultivation. And the debt is increasing.

To fix the problem Develop water sources for highland agriculture to provide communities with sufficient water for cultivation throughout the year and be able to transition from monoculture to various agricultural practices, along with non-sectoral career development. agriculture In the part of the development of water sources The community will jointly formulate a plan and set up a water pipe system for the members, which all members have to work together to complete as planned.

The result of the operation made the farmers at Ban Mae Pan-San Gieng, an area of 1,200 rai, with water used all year. Registered 80 members with a total plant area of 970 rai. Provincial longan purchase network Pig farms are safe. And community product processing plants. Community enterprise groups of 146 members have a net profit of 1,209,243 baht. Food processing safety group. Environment-friendly products. Model of Sustainable Community of Chiang Mai Province In which the Cabinet went to study areas in 2019

Social Business by People with Disabilities (PWDs)

True Corporation Public Company Limited

27 disabled people earn
9,000 Baths/month
Disabled Service Center (Kalasin Province) earn profit from social business
100,000 Baths/month

Historically, assistance to the disabled prople was primarily a form of free assistance, and it was a form of sympathy and compassion. True developed a system to accept handicapped apprentices in terms of employment and market, beginning with the handicapped group in Yang Talat District, Kalasin Province.

"Create job opportunities for the disabled, provide agricultural training which focus on products that have market support, and establish agricultural businesses for the disabled through the social support market."

Training in vocational skills for disabled people based on the Agricultural Curriculum Section 35 focuses on skill development and practice growing crops that are definitely supported by the market, create a network of farmers who adhere to GAP standards. Blind service centers help improve quality of life, create jobs for disabled people, such as GMP-standard raw material sorting plants, catfish ponds, Hydroponics vegetable demonstration plot, mushroom briquette nursery with production capacity of 1,500 cubes/day. These items could be high-quality raw materials delivered to the CPRAM factory and made into a variety of products, such as rice boxes sold at 7-11 stores.

Thailand Association of the Blind earns money through raw materials and social enterprises. Previously, product sales could be influenced by the buyer's kindness; however, this has shifted to sales quality and market competition.

Leading enterprises accelerate drive poverty alleviation to prosperity

Laibin Chia Tai Modern Agriculture CO.,Ltd.

Community income
90,000
Baht/year/household

Wuxuan County is a poor county in Guangxi Zhuang Autonomous Region,which has a remote location, inconvenient transportation, lack of arable land and village collective economic income whice caused poverty in some villages, and young laborers chose to leave their homes to work. Therefore, there is a shortage of labor and knowledgeable and educated people lead the villagers to get rich.

For Helped 60 households of about 300 from poverty. Encourage participation in a pig farm.

In addition to farmers raising pigs Farmers are also encouraged to grow sugarcane and fruit around the farms so that they can earn more.

Build relationships between the company and farmers. The concept of a four-part cooperation, "Government, Private, Financial Institution and Farmers" was implemented in Boyao Village by promoting to raise 4,400 pigs per year.

Thereafter, the Wuxuan County government gathered a total of 11.5 million yuan poverty alleviation fund from 23 villages in March 2019 and commissioned Wuxuan County Government Platform Company to invest in pig farms and lease them to Laibin Chia Tai after construction was completed after one. Year of the Total Economic Village Project "Yifeng Laishan FPS16800 Pig Farm" was completed in April 2020, the annual stable income of Yifeng Laishan FPS16800 pig farm is RMB 4.38 million, and 23 villages will receive dividends.

The project has provided 25 local jobs and a total of 8,866 people were helped and lifted out of poverty. Our model has attracted 6 " Leaders in getting rich "and a total of 27 village collectives and 594 poor households were helped, each household could receive a dividend of about 17,700 yuan per year.

Help 93 households have already used biogas for free,and provided ecological fertilizers for 2,800 acres of eucalyptus forests and 790 acres of fruit forests.

Change farmers' lives with Organic fertilizers.

Charoen Pokphand Group Co., Ltd.

Generate income average

1.1 bath/production cycle

More than 80% of Ban Don Chai Pa Kham community are engaged in agriculture. Because of the higher farming costs every year,from seed, fertilizer and other costs Causing farmers' income to continue to decline. Therefore the incorporation of agriculture Together to produce bio-organic fertilizers. With the support of organizations and various departments Promote knowledge of production planning and management skills throughout the supply chain.

Enhance farmers to have knowledge in the process of managing organic fertilizers. Throughout the supply chain. Reduce farming costs of local farmers. Support the creation of careers in the community.

Traceable and from sustainable sources that the problems to the development process of hill tribe farmers develop a better quality of life for hill tribe farmers in terms of income, well-being and stability in the product chain. For a better life Makro is a part In the process By adopting technology.Knowledge from Mae Jo University Kasetsart University And network partners with added good performance for hill tribe farmers, they can produce safe, standing goods on yourself . Passed the GAP certification from the Ministry of Agriculture. It also builds a packing house on GMP certification from the FDA, along with a QR code traceability through I-trace to deliver a safe, standardized product from the mountain to the city.a problems to be solved quickly Sell the payback yield Quick profit Create a good quality of life for hill tribe farmers. Generate income for the plateau society community Build stability for the organization Build economic strength for the nation

Increase employment and generate income for the average hill tribe farmer per family more than 162,000 baht / year.

Promote integration of hill tribe farmers It was a proto type of farmer community.

Create education costs also access to technology and transportation a better life from producing products that are safe and sustainable .

Improve quality of life for children under Child Institute

True Corporation Public Company Limited

Children who live in an Institute are mostly left there by their parensts who are not ready to take care of children. Some come from broken families; some are abused. These children definitely lack love and caring. The number of these children tends to increase amidst all these social and economic problems. When they turn 18 years old, they have to live on their own. But how can they survive?

Improve quality of life for children under the Children's Institute by providing vocational training and life skills that are needed until they can live on their own. Promote self-esteem and value to reduce social problems.

Cooperate with the Department of Children and Youth to analyze the problem and create solutions. Utilize resources from the True Group and the CP Group to support life skills training for the children under the concept of "Get ready for the outside world".

More than 494 children were involved and benefited from the training and activities. There are 9 children who were granted scholarships from Panyapiwat, so they can eventually earn income, work and live with the other people in society with pride and dignity. Children are aware and understand the danger and harmfulness of the cyber world and must learn how to live safely.

Restoration of Marine Habitats for Artisanal Fishing Communities through Sustainable Artificial Reefs Project.

True Corporation Public Company Limited

Average more income

43,000 Bath/unit

The fishing productivity of the artisanal fisheries has been on a decreasing trend for the past decade. This decrease is confirmed by the annual report from the Department of Fisheries which showed Catch Per Unit Effort of marine fisheries has lowered 15 times compare to 1961. This low productivity of marine fisheries highly impacted the artisanal fisheries because they fully rely on fishing stocks. These fishermen are accounted for 85% of the total number of fishermen in Thailand.

Restoration of marine natural resources by deploying artificial habitat and nursery ground. Increase artisanal fishing communities income and improve their livelihood.Improve and encourage full participation from all stakeholder for restoration marine natural resources.

The project was launched by the Sustainability and Good Governance Office to address the underlying fishing problems of artisanal fisheries. We worked together with an NGO, Department of Fisheries and artisanal fisheries to find solutions by deploying artificial reefs in 4 areas with a total of 2,000 structures. A public hearing process, designing pattern and pointing location of artificial reef deployment were carried out with the artisanal fishing communities. We have requested permission for the artificial reefs deployment from the government agency which led to a long-term collaboration on marine resource enhancement with the Department of Fisheries.

In 2017, the artificial reef structures were deployed at Sathing phra, Songkhla and Panare, Pattani. In 2019, the artificial reef structures were deployed at Ranot, Songkhla and Mueang, Narathiwat. We worked with Prince of Songkhla University to conduct a study to monitor and assess the deployed artificial reefs in terms of economic impact, society impact, and environment impact. This assessment is done at Sathing phra, Songkhla in which it is considered as a representative of the four areas.

Longan for happiness, Return happiness to the community.

Siam Makro Public Company Limited.

Generate income for more than 100 farmers

36 million Baths / Year

Covered area 680 Rais

"Solving the problem of longan oversupply and falling prices by encouraging farmers to produce products that meet standards and are safe."

Farmers in Pa Sang District Lamphun Province, have passed down a method of cultivating longan from generation to generation. With a large amount of production coming out at the same time but no systematic management, resulting in insufficient production quality product and oversupply. They had to go out to sell or leave with the plant because the harvest was insufficient.

Makro and the Department of Agricultural Extension have been working together to upgrade the Longan E-Door standard to the GAP standard in order to produce quality, safe, traceable, and meet market demand. They built a packing house, quality selection and extending the products shelf life before entering the market, make the acceptance by using marketing plan to lead production, a cooperative group to promote farmers, also the creation of jobs and local jobs.

Over 8 years, more than 280 farmers participated.

8 DECENT WORK AND ECONOMIC GROWTH

Strengthen Artisanal Fishing Communities Income through Local Spotted Scat Fish Conservation Project

Charoen Pokphand Group Co., Ltd.

"Conservation and restoration of resources in Songkhla Lake, transfer of knowledge of aquaculture artificial insemination of squid, Creating the community for raising Spotted scat fish in cages."

Release fish species back to nature
3,113 fish
The fish cage culture system
2,000 fish/Community

In general, spotted scat fish can be found along the river's mouths throughout Thailand. The fish is not particularly popular and being sold at low price. Due to the geographic and environmental characteristics at the Songkhla lake, the fish has been found to pose a unique texture which result in its extra popularity. Therefore, the fish in Songkhla lake are always in high demand. At present, the fish stock has been dramat ically decreased and causes the artisanal fisheries to lose their income.

Conservation and restoration of Spotted scat fish in the Songkhla lake. Transfer the knowledge of artificial propagation of Spotted scat fish to artisanal fishing small-scale fisheries communities. Supporting the Spotted scat fish cultivation for artisanal fishing small-scale fisheries communities

The Sustainability and Good Governance Office has been recognizing the problems of artisanal fisheries. Therefore, we worked together with NGO, Depart ment of Fisheries, University, artisanal fisheries, and CPF to find solutions. This project started with a selection of four artisanal fishing communities around Songkhla lake to participate in the training on comprehensive Spotted scat fish cultivation at the National Institute of Coastal Aquaculture. Each of these artisanal fishing communities later proposed a fish-related project considering their contexts and potentials. We assessed the feasibility of each proposed project through fieldwork, two projects have been selected: 1) Artificial propagation project started at Ban Tha Sao, Songkhla since September, 2019. Fish breeders are available from community donations. The fisherman would record the number of juvenile fish and release them back to nature, along with recording the natural capture rates. 2) The fish cage culture system project started at Ban Falami and Ban Chongfuen, Phatthalung and Ban Khok Muang, Songkhla since March, 2020. The fishermen would record the cost and income to be used as the cost of the next generation.

Create, Coordinate, Happiness,
Community "Sufficiency Economy"

CPF (Thailand) Public Company Limited

"Learning Center of the Sufficiency Economy Development : Ban Sap Ruang Sai , Chaiyaphum Province"

Farmers earn 214 % Total 3.34 million Baths / Year

"Expanding water system for agriculture, use different cultivation areas according to each person's aptitude to meet the needs of the community"

Ban Sap Ruang Sai Community primarily grew sugar cane and cassava. Product prices fluctuate, making the investment unprofitable. Their earnings are insufficient to cover their basic needs. As a result, the idea of additional occupations and expanding irrigation area to increase farming ground arose.

With the Stock Structure Method, CPF used innovation to overcome the problem of water scarcity, by adding a catchment tower and a water distributor tower that cover 35 rai instead of 28 rai, the farming season is extended from 8 months to all year. In addition, there is an endeavor to use eggshell fertilizer and to use the IOT to pre-purchase organic vegetables in order to connect with consumers' communities for their good health.

8 DECENT WORK AND ECONOMIC GROWTH

Establish base safety standards, guide farmers to grow fruits and vegetables on order, and help farmers get rich

CP Lotus South

There are many intermediate circulation links of agricultural products, so that farmers are often in a weak position in the ability to obtain information about consumer demand and in the ability to negotiate prices, and farmers become the passive recipients of prices. The information of consumer market demand is not transmitted to farmers quickly, leading to farmers' blind planting, resulting in the backlog of agricultural products and unmarketable, so that the planting cost and sales price are inverted, bringing economic losses to farmers. In addition, farmers lack planting techniques and standard guidance.

Develop the base commodity standard manual, train the base farmers and improve the planting knowledge.Standardize the use of chemical agents, to standardize agricultural products.

Since 2015, CP Lotus south has guided farmers to plant vegetables and fruits on order, and conducted training for farmers by establishing plant safety standards and commodity standard manuals for the base.

Due to the realization of standardization, in line with food safety, and meeting the requirements of market access, the product supply exceeds demand.

The productss can be supplied to other channels besides the Lotus supermarkets, and the farmers have achieved self-reliance. CP Lotus and the Maoming city government of Guangdong Province are cooperating to set up an online trading platform for farmers, popularize agricultural technology and planting knowledge, provide online guidance from agricultural experts, and achieve information symmetry between supply and demand of agricultural products and buyers.

After the establishment of safety standards for planting in the base, 10%-20% of the agricultural products were sold to Lotus and also to other supermarket channels because they met the market demand.

"Four in One" Project of Beijing Charoen Pokphand Egg Industry

Beijing Charoen Pokphand Egg Industry Co.,Ltd.

Due to the lack of local technology, capital, market, and the independence of various legal systems, economic development is restricted; a large number of working and living people, high production costs of agricultural products, and non-automated production make the insufficient resources even more inadequate and reasonable Farmers' income has been weak with the use of the use of food products; unscientific and non-standard production methods will not only cause low yields, but also "small, scattered, messy, and dirty" phenomena, which cannot guarantee food safety and environmental sanitation; no brand, Lack of talents and lack of integration of the "tertiary industries" will also make local development stagnant.

To create agricultural modernization projects to Improve agricultural development and establish a model of modern agriculture. Create a modern and demonstrative agricultural project, explore the realization of green and sustainable agricultural ecological development, and take into account the way for farmers' poverty alleviation.

852 families of farmers earn rent income And those participating in agricultural cooperatives have been dividing dividends since 2012. From years 1-8 they will get five thousand yuan a year, years 9-12 will get seven thousand four hundred yuan a year, years 13-20 will get 23,900 yuan per year. Yearly and every year the rental profit is 5%. In 2014, the rent would become 1340 RMB per rai, and 20 years later, all equipment and premises would increase to CNY 36 million and this amount. Will return to all agricultural cooperatives.

Training for New-type Professional Farmers

CP Planting Business

The characteristics and difficulties of the planting industry are scattered production areas, including scattered personnel, scattered products, and scattered markets; slow development and overall backwardness, low level of standardization of agricultural production and agricultural facilities; unstable quality of agricultural products and lack of brand awareness; the serious contradiction between small-scale agricultural production and large-scale market, it is the opportunity for the development of our planting business and the value of training farmers.

The aim is to train millions of modern vocational farmers of high quality and high technology, to study standardized farm production through training and assessment, and to improve the level of mechanization application, to provide quality and safety guarantee for the base purchase of agricultural products, so as to save cost, increase farmers' income, and promote the overall agricultural development.

To make full use of agricultural resources, CP Planting Business has set up a core demonstration platform for the group, locals, business partners, and others to share and to create win-win deals, through this platform for farmers to provide outstanding breeding research, technical planting service, agricultural machinery management, and other training. The specific process including 1. Give priority to training a group of small business owners; 2. Select a group of outstanding students and establish long-term cooperative relations; 3. Outstanding students then can generally drive the surrounding farmers; 4. Expand the training scale to millions of new-type professional farmers.

The training of new-type Professional farmers is of great significance, the training results are outstanding, more than 20,000 farmers have received agricultural training; In 2018, Cixi Farmland successfully established a National Training Base for new-type professional farmers, and successfully started classes, the scope of training has been extended to seven leading products and major agricultural towns, can increase the income of farmers from agriculture by 30 percent, has enhanced agricultural development.

The Universal designed QR Code for the visually impaired and the hearing impaired, including general consumer gas been used in 3 Makro branches in Chiang Mai;

Makro, Mae Rim branch Makro, Hangdong branch Makro Nong Pa Khrang branch. People with disabilities (who are the customers of Makro in three branches which mentioned above) have access to various information of products. Makro customers (in three mentioned branches) are able to recognize the value of products that are developed and manufactured by people with disabilities.

ESR Spirit

"Leave no colleague behind"

C.P Vietnam Corporation

Along with the development of CPV has invested in Vietnam from 1993, now has more than 30,000 thousand employees which continue to grow further according to the development of the Company.

So what should we do to engage 30,000 employees with each other with harmony, solidarity, love, so that they can help each other overcome the events in life, create sharing culture in organization coupled with sustainable development of the company

For helping employees and their families when they have difficulties and events in their lives. Building solidarity, love, sacrifice, sharing, especially cohesion in the company. Practice the model "Leave no colleague far behind" in the business.

The project started with the Home Visiting activity to help change the relationship between the leader and the employee to become more connected.

The difficulties of the employees and their families are resolved richly, creatively, synergistically, voluntarily, non-profit, effectively ... All comes from the sincere and enthusiastic hearts, with the humanistic message conveyed: "For colleagues, we do not leave each other" through activities such as visiting staff's houses, building - repairing houses, organizing CPV family day, CPV festival volunteer through the program Joining hands to repay the Fatherland

Financially, the project automatically mobilizes donations made from leaders and employees in the company.

Project Benefits

1. 100 employees home visits (uncountable)
2. 50 Synergy Houses were built
3. 100 cases were helped, including many cases of "Micracle Stories"
4. 6 times of CPV Family Day & the program Dedi cate for the Country
5. CPV's Corporate Culture

Care for the staff, warm heart cohesion

Qinhuangdao Chia Tai Co.,Ltd.

When an employee or family member suffers from a serious illness or sudden situation, the huge medical expenses will bring an unbearable huge blow to the family economy of the employee, causing the employee and family member to lose the confidence of treatment and the quality of life will drop sharply, as a result, families suffer from illness and poverty, and are in dire need of outside financial help.

The extremely poor staff and workers living pressure to be huge, lacks the material to tide over the difficulty. The staff oneself physical examination guard consciousness is poor, causes the malignant disease to be ignored, thus develops to the point of irretrievable.

Female employees need to take care of work and fam ily at the same time, ignoring the needs of self-health and welfare, need to give warm and considerate care, improve life happiness.

Form a full participation of mutual help and warm-hearted cohesion model, so that all employees happy work, enjoy a carefree life!

The first level is to carry out "love and mutual help, warm heart and gather strength" for the people who have health problems: 1. Whenever there are seriously ill or poor workers in the workshop, the same team or workshop staff will organize fund-raising at the first time, and at the same time, they will take advantage of the trade union platform to launch proposals.

2. On the occasion of the arrival of major traditional festivals, trade unions and staff representatives will visit the homes of seriously ill and destitute workers.

The second level is to assist employees to prevent in advance and carry out "caring for employees' health and helping family happiness":

In 2016, funds raised 209,100 yuan from employees and labor unions. Helped employees who were involved in car accidents and four employees with cancer.

Important traditional festivals, trade union representatives and employees visit homes. And give a survival bag To all 30 families of the sick and poor employees.

Health check-up of 1,194 employees, which helped prevent risks, and five people found early tumor lesions.

Jiangsu Swine Business

Employee Care

Jiangsu Swine Business

Under the biological safety requirements of ASF prevention, employees have to work and live in the farm for a long time without being with their family. Thus, various ways are required to strengthen their bond with their family. As employers, companies need to care about not only the employees, but also their family. Employees with different financial status come from different part of the country with imbalanced of regional development. Most employees would have financial pressure and no back-up when they encounter

major economic difficulties such as illness and others.

Provide both mental and material assistance to employees, help them enhance family affection, fulfill filial piety and relieve the family-related mental pressure and let their family members understand and support their work.

Provide financial assistance for employees to deal with crisis and improve their ability of risk resistance to eliminate their worries.

Enhance the sense of belonging and the stability of employees, improve the popularity of the group's products, and reduce the risk of ASF virus contamination.

In terms of "family affection 1+1", it covers more than 750 families of Jiangsu swine business. More than 7,200 employees and their families received cash offers and gift boxes of pork every year. The project has won a good reputation from employees' families.

In terms of "mutual funds", in each year, there is about 60 times of congratulation & condolence activities for weddings, funerals, weddings, etc. And, 10 families of employees with financial difficulties are visited.

The project resolved the problem of safe pork con sumption of employees' families which helped their families avoid purchasing pork from the market that could introduce risk of ASF virus contamination to the employee.

Development of the digital system for SATJA Savings Groups in digital era

Occupational funding source

5,000,000 Bath/group

At present, the establishment of Satja Savings Group in Thailand has grown to more than 20,000 groups and approximately 4 million members. The cash flow in these groups has increased to approximately 30 billion baht. The rapid growth has frequently seen problems

in the media, such as embezzlement of group directors, mistakes in money management that make money running out of cash for transactions including double transactions, etc.

For Reduce the burden of carrying a passbook, data processing time, reducing the loss of data from the loss of the member's book or disasters, and raise awareness of good financial discipline.

Development of documents and procedures In order to contain all important information that is complete and legally usable, including being able to be examined with transparency

Development of web application, which has studied and gathered information of the target community such as their existing technology usage, knowledge sharing within target groups and our preparation of the digital system developement as well.

Community financial information is securely stored digitally. All financial transaction documents in the system are digitized and legally usable. The target group has been passed on digital knowledge and related laws including financial awareness.

Charity Project of "CP Love, Chinese Dream" in Xinjiang

Xinjiang Chia Tai Food Co.,Ltd

Currently, there are many vulnerable groups in the society, such as left-behind children, lonely old people, the disabled and poor residents, who lack care and basic living security in their daily life, let alone sustainable economic sources. This will result in a series of social problems such as impoverished students' lack of access to good educational resources, Quality of life of the elderly and the disabled.

Practice Group values and develop love is the spirit of selfless dedication. Help vulnerable groups in society to obtain sustainable economic sources. Help improve the social welfare system, call on the society to attend the vulnerable groups through practical actions, and provide them with more help and care.

Since 2014, the "CP Love, Chinese Dream" project has been conducting more than 100 charitable activities such as poverty alleviation. Education promotion Helping the elderly and public welfare benefiting over 50,000 people with over 1 million yuan of charity. The Xinjiang region has developed a pig business cooperation program in southern Xinjiang. And more than 500 local people are employed, generating 50% more per capita income per year. Opened "CP Scholarships" at three universities, offering a scholarship of 80,000 yuan to 40 students per year. Established "Sunset Dream Charity Shop" in CP Food Direct Sales Center to help the elderly in the community sell homemade handicrafts.

At least 1,500 people are employed in remote areas of southern Xinjiang. Increasing per capita income per year by 50% helps alleviate life problems of socially disadvantaged groups. Help the elderly in the com munity to get a sustainable economic source. Help outstanding poor students complete their studies and earn outstanding talents for the company.

Community Bank for Autism

True Corporation Public Company Limited

get help

366 people

Occupational funding source

2,700,000 bath

The condition of a person with autism requires a very close and continuous treatment resulting to higher expenses of the parent to take care of their autistic child/children. Majority of the families of autistic children are unemployed; women with autistic children are usually single moms earning only low wages and come from low income families. These families usually depend on government welfare which ranges only from 800 to 1,000 baht per month. This situation leads them to be constantly indebted to illegal loan sharks, especially those who run or manage small businesses of their own.

Debt free, Happy life

Charoen Pokphand Foods Public Company Limited

The household debt problem is a national problem. That the top management deems it is important to the quality of life of workers, in the business line. Therefore, randomly surveyed 769 workers from 24 farms found that there were 576 debts with total liabilities of 66 million baht. And in this number, It is a total of 173 cases of informal debt of 8 million baht, which is worrying about the debt collection of the informal debt system. Scare the workers some people do not dare to come to work. Resulting in regular absences or come to work but have to hide and hide, causing unhappiness in work and affecting the efficiency of the work performed as well.

To assist personnel who are experiencing financial difficulties in repaying loans with interest rates higher than 20% per year from loan sharks or elsewhere. They will be helped to access new loans with rates lower than 10% from reliable and established financial institutions.

Personnel will acquire knowledge and skills in managing personal finance and budgeting. This will lead to improved spending and savings.

We surveyed and interviewed individuals with financial problems and a loan with interest more than 20% per year. They will be offered help and guidance to access and borrow from established financial institutions with interest rate lower than 10% per year.

Individuals who joined this project, must comply with the agreement to pay off debt, cancel their credit card and avoid borrowing money from disreputable sources in the future. They will commit to learning to manage their household budget better and get a better understanding of expenses. They will give attention to savings by reducing or stop extravagant spending; in order to increase savings and reducing debt. When they commit to comply with the project agreement and have purpose in life; they will get new loan with low interest rate and long loan term. They will have better financial liquidity. When they are determined on the terms of this project so they will have a purpose in life to get out of debt faster and happier.

Estimation shows that 552 swine business employees have taken loans with an interest rate less than 10% per year, the total sum of loans is 88 million baht. This means that the 2631 employees have saved significantly. This project is now expanded to another 50 businesses in CP group and 1974 employees have taken loans, totaling 665 million baht.

Community Rare Tree Species Distribution Center

CP ALL Public Company Limited

CPALL attended a meeting with the community and found that in the past, the villagers had cut down trees for use. Most of which are rare plants in the local area. At present, there are less than 100 plants left without additional plantings because they cannot because and reproduce by themselves.

Project Purpose to conserve rare plants in the community and increase the number of rare plants in the community. Establish as a distribution center for rare plants in the community.

CP ALL Buriram Distribution Center established a distribution center for rare plants in the community, namely Yang Hiang, Phayom, Sabaeng and Canana, which currently there are only 49 plants left from the cooperation of the center. And Ban Nong Ma community Jointly conserve existing plants And jointly planted more than 529 trees to deliver free quality seedlings For planting in community areas and for joint conservation Which will benefit the ecosystem To restore natural resources and the environment And increase food sources Add green space to the community and pass it on as a natural heritage to future generations.

1. Absorb gas carbon dioxide Which is responsible for the greenhouse effect And global warming.
2. Release oxygen during the day. Purify the air

Bellisio Foods, Health Center

Bellisio Foods, Inc.

Jackson, Ohio has a population of about 6.29K individuals. Meaning that Bellisio Foods employs nearly 20% of the population of Jackson. It's also important to know that the median income per household is nearly $38,000 a year. The lack of wealth distribution, resources, and access has created a "Health Desert" in Southeast Ohio. There is a great need for the residents of Jackson to have access to quality healthcare in an environment that is safe and affordable. The Bellisio Foods Health Center provides free healthcare services to all Bellisio employees in Jackson & surrounding cities.

To Increase the health & health education of employees. Provide affordable healthcare alternatives for low-income families, as an advantage when working for Bellisio Foods. Improve the quality of life for the Bellisio Foods employee

The Bellisio Health Center also possesses a pharmacy for employees to buy affordable medications. This physician/pharmacy model in the same building, on the Bellisio Campus, helps the organization to build relationships with Bellisio employees. The Health Center staff builds a positive rapport with the plant employees, making them more likely to request information on a more health-conscious lifestyle or how to manage chronic health issues.

Total population engagement rose 4% to 52%, one of the highest MOM increases (typically about 2% increase) with 51 new patients receiving care this month. Bellisio Foods has offset medical and insurance costs and accumulate a savings of $600,000

CP ALLxArt Story
by Autistic Thai

CP ALL Public Company Limited

The Autistic Thai Foundation is a public benefit organization that has been certified as an organization for people with disabilities, a very good level from the Department of Empowerment of Persons with Disabilities, Ministry of Social Development and Human. Currently, taking care of more than 12,500 families and people with autism with a budget of 50 million Baht a year, with some funding from the public and private sectors who are interested. But still, it's not enough to operate.

The Boutique for All business department, Office of Social and Environmental Affairs, CP All Plc. Develop souvenir products for sale to executives and employees. Saw an opportunity to promote career-building and generate income for autistic people by jointly developing products from artworks of autistic youths

The Boutique for All liaises with the Autistic Thai Foundation to find suitable ways for autistic youths to show their abilities by developing the pattern from the concepts that were taught through the Art teachers of the Foundation. The teacher will teach the techniques to the artistic talents of the Autistic Thai Foundation to draw their unique and creative patterns from the imag ination of each youth. From more than 20 artworks of artistically talented youths of the Autistic Thai Foundation to make the one large canvas.

Then, Boutique for All chose for further development as a product of "7-Eleven with Thai Community", which consists of photos of 7-Eleven stores located in the Thai community. Along with other sub-businesses under the management of CP All Public Company Limited, the photo copyrights have been granted permission from the owner 7-Eleven for the production of such designs for charity according to the intention of the project. The income after deducting expenses is given to the Autistic Thai Foundation. In addition to the fabric mask that was an initiative product of the project, It has also developed the other 5-6 products until now.

The income after deducting expenses is given to the Autistic Thai Foundation for operating within the foundation. The Autistic Thai Foundation also donates as income to the youths who have contributed to the works. The first income from the distribution of "7-Eleven with Thai Community" patterned cloth masks has been given 189,184.00 Baht. The Boutique for All and the Autistic Thai Foundation also have continuous cooperation in the product development together which will generate income to support the Autistic Thai Foundation.

"Tuition-free with income project"
Panyapiwat Learning Center – CPRAM

CPRAM Company Limited.

CPRAM sees the importance of education for the reason that education is a principal foundation for improving the quality of life of people and will lead to the development of the country. However, in reality, a great number of students in Thailand do not have opportunities to pursue a higher level of education due to the lack of financial support, and those with opportunities face the unemployment problem because of education-job mismatches results in the ineffectiveness of education. To help low-income students gain access to higher education and earn money while studying. To build quality citizens by providing the specific skills which match the practical needs of labor market and to enhance the quality of life.To support social value by developing well-educated citizens which contribute to the country's development.

CPRAM initiated the 'Tuition-free with income program' by founding Panyapiwat Learning Center in 2008 in collaboration with Panyapiwat Technological College. The learning center has opened in a dual vocational education, which offers 2 study programs: food business and mechatronics program for underprivileged to pursue higher education and earn income while studying. The target group is employees' children, community members, and disadvantaged students nationwide. CPRAM offers aid to students including full scholarship, clothes, textbooks, school supplies, accommodation, shuttle bus, allowances during job training and offers full-time job position to graduates.Besides, CPRAM provides the diploma-bachelor's degree scholarship for underprivileged students. From 13-year of operation, 334 students had completed their studies and became knowledgeable workers that match the demands of the labor market. Therefore, 100% of program participants have been employed and have sufficient income to support themselves and their families. This program helps to improve individual's well being in a sustainable way. CPRAM has now given over 674 scholarships to students, worth over 21 million baht.

Providing Access to Quality Education for Migrant Children in Dandelion Middle School

Chiatai Land Co., Ltd.

Create Educational opportunities

500 household

Due to the restrictive policies on household registration and the education system and their poor families, migrant children are one of the vulnerable groups in cities of China. Their difficulties are as follows: it is difficult for them to receive fair and high-quality education; dropouts as a result of poverty; bad dietary structure and nutrition; lack of teaching aids and living materials.

To Help students with difficulties to continue fair and quality education. Help migrant children to improve their learning quality. Help migrant children and their family to improve their living quality.

Since 2017, Chia Tai Land and Chia Tai Henning took Dandelion Middle School as the designated target, and called on the employees including other sub-companies to participate in it. The main practices are as follows:

1. The company invited other sub-company ofCP Group to provide its products such as eggs, steamed egg bowl, and fried onion rings by charity sales to increase students' protein intake.
2. Regularly donate cash, teaching equipment and dai ly necessities to the school.
3. Through the company's network resources and so cial relations, high-quality culture, art, sports, science and technology are introduced to Dandelion School, and the students are helped to join the drama, choir, symphony orchestra and other related activities.
4. In the past three years, not only all employees have actively involved in voluntary activities, but more social resources and stakeholders have begun to help the development of the school under the call, including local governments, social institutions, enterprises, foundations, and educational institutions like American Ivy League universities and first-class universities in China.

CP Corporate University

Cultivates Elite Talents for Stakeholders

CP Lotus South

After the reforming and opening up, China's family business has developed rapidly.The first generation of family business has entered into the 21st century and gradually entered the succession period of family business, transferring the business from the previous generation of entrepreneurs to the next generation.According to the data of PWC, the average age of Chinese family businesses is less than 10 years, much shorter than that of family businesses in Europe, America and Japan.More than 80% of the suppliers and 90% of the owners of the CP Lotus south are family businesses, which need to cultivate their next generation successors and improve their business management ability.

To impart the century-old corporate culture, values and management experience of CP Group to the new generation of the suppliers and owners of CP Lotus, help them expand their international vision, and realize the win-win development situation of CP Lotus, suppliers and owners.

In 2015, CP Corporate university establish heritage institute, courses in business management study, organize entrepreneurs exchanges activities,and train elite talents for CP lotus's suppliers and owners, teaching one hundred CP group enterprise management experience and corporate culture, for example, Invited Mr.dhanin chearavanont,senior chairman of CP group, Mr.Korsak chairasmisak, Chairman of CP ALL and professor from harvard university, teaching the new generation of entrepreneurs, go to study in CP companies in Thailand, carried out discussion exchange, understanding CP Group's one hundred corporate culture, for them to open up the international vision,learn the social responsibility and dedication spirit of century-old enterprise.

CP Lotus south has successfully help more than 50 entrepreneurs from stakeholder to success, and practiced corporate social responsibility together with CP Lotus.

CP Lotus continues to carry out quality education activities for children every year to sow seeds for the healthy growth of the next generation

CP Lotus South

Morn than
3,800 activities
Hundreds of thousands of children attended.

Children's education in modern society faces many problems, focusing on" exam-oriented education "and ignoring" quality-oriented education ".Parents expect their children to do well in school and get high test scores, while schools seek high graduation rates.The quality education of children isn't gotten enough attention, especially the filial piety moral education.At the same time, the protection of local culture and customs is also ignored, and the environmental prob lems are becoming more and more serious. It is necessary to cultivate children's awareness of environmental protection from an early age.

To promote children's quality-oriented education, especially the moral education of gratitude and filial piety; 2.to protect cultural heritage and local languages; To help the children set up the awareness of environmental protection;

CP Lotus continues to invite parents and children from the community where the store is located to participate in various parent-child activities every year.Meanwhile,Lotus together with the store owners to print Children's books as free gifts for learning and reading.Through various activities, we pass the correct values for the next generation to grow healthily. The benevolence of the lotus has been recognized by the government. In the construction of children's park by the Shantou municipal government, the executive chairman of the CP lotus, Mr. Li Wenhai, was specially invited to design the sculpture "gratitude" for grateful mothers, and the children's park was taken as an educational base for children to learn gratitude and filial piety.At the same time, the education department has also compiled picture books for children and provided them to schools and kindergartens to improve children's quality-oriented education.The initiative of CP Lotus to pay attention to children's quality education also touched the stakeholders,the owners of CP Lotus stores, joined in the children's activities , funded the printing of "Chaoshan Culture Reader" and donated it to the local city library, street and town cultural rooms and all primary and middle schools.

Cultivation for Skilled juveniles to Thai society

Panyapiwat Technological College

earning while studying

4,000-8,500

baht/person/year

There were children and young people who had not a chance to accessed to the basic supported services. As reported by the International Labor Organization, "Thailand had 1.3 million people at the age of 15-24 years who did not attend in the education or employment system. The situation Lead them into the poor life.

To Preparing knowledges and necessary skills for life including occupational skills and self-development for underprivileged children and youth. Employment supporting for children and youth.

We implemented this project based on all stakeholder participation. (Stakeholder means : children, parents and the acquiree in the custody of the Department of Corrections, Department of Juvenile Observation and Control). CP ALL was a business sector while the educational sector was Panyapiwat Technological College. All of them Contributed in educational and professional training. All 3 parties had shared thought out, planned and set up the operational framework and specifying details of activities that together agreed as appropriate to the needs of each group.

Economy aspect : children earned some income according to the level of education while studying.

Society aspect : Reduced risk groups which will growing up into uneducated adults with lack of life and professional skills. Strengthen children and lead them to make the strong community.

Environment aspect : Added value to the social environment in terms of Social Control.

Student Care

CP ALL Public Company Limited

CP All co. Ltd., provide Work-based Education - academic studies plus technical practicum, to create jobs, improve quality of life and increase income for communities, by supporting adolescents with scholarships, allowance and job guarantee.

To resolve obstacles we faced in 2016 such as 15.19% dropout rates, pregnancy, drug abuse and workplace issues, Education Plans and Policy Department innitiated "Student Care Project" to improve administrative process from recruitment to graduation.

The project purposes to decrease dropout rates by 1% of previous year, Produce high-caliber workforce by promoting adolescents to complete higher education (vocational and university level), to earn incomes while studying ,and to have a career path after graduate, Provide additional manpower for company's business expansion.

After analyzing reserch results from Counselling Center, Education Plan and Policy Department proposed that inconsistency among departments might be the factor of dropouts.

Therefore, workshops are held to brainstorm ideas from related departments to develop a standardize guidelines under 7 Student Care missions In 2020, dropout rates decreased to 7.58% - 7% less than 2016, thus more students remain in the system. As a result,

1) student created incomes in communities THB 180,000 / person / year from internship earnings and salary after graduate,

2) company workforce was added by 19,845 in 2020,

3) competent Thai citizens were forged - 3,000 graduates with employment,

4) Social Ed-Biz Innovation Platform were created by integrating education and business to produce labor that meet business needs.

Mobile Literacy for Out-of-School Children in 5 Southern Border Provinces

True Corporation Public Company Limited

Pondok or Madrasah schools were established by community religious teachers, focusing on teaching Quran to make young people a good person. The students, most of whom are poor and stay at these boarding schools, still have limited access to educational resources. Due to restrictions on the use of media such as the Internet, social media or TV, most students have limited access to the outside world, affecting their development of knowledge and skills and making them at risk of being exploited.

To upgrade the quality of learning of students and capacity of teachers in Pondok schools/community learning center (CLC) in 5 southern border provinces to be on par with other schools by promoting literacy skills and knowledge through ICT, while supporting identity and culture as well as religious beliefs to maintain the unity as Thai people.

True and UNESCO Bangkok support Office of the Non-Formal and Informal Education, Ministry of Education to implement basic education and skills development for students in five Ponkdok schools. Provide ICT devices and learning materials to 5 schools/CLC including Trueplookpanya TV and internet, tablets preloaded with LearnBig App developed by UNESCO, a content app with over 1,200 books and learning materials in Thai and Malay languages. Organize a visit at Trueplookpanya model school and capacity training for teachers to design ICT integrated pedagogy based on the specific contexts of each school. Implement mobile learning and teaching with ICT at 5 schools/CLC, and monitor the project progress. At least 282 students benefit from learning with ICT devices and internet. The assessment in 2020 shows that the students have been motivated and improved learning proficiency after participating in the project. The number of students who obtain Grade 0 in Non-Formal Education programme was decreased by 15.7% in Yala, 23.2% in Pattani, and 55.3% in Narathiwat. At least 10 principals/teachers have enhanced capacity in teaching with ICT.

Fish Culture Project

Charoen Pokphand Foods Philippines Corporation

The Government has launch a project to schools having underweight children to support the sufficient nutrient towards better health and higher quality of education. However, the funds allocated is only 16.00 PHP per person per day which is insufficient for the expenses of the targeted children.

To provide cooking materials to the schools for underweight students. To enhance knowledge of students in applying household works and future career, and support the schools to gain additional income from selling of excess harvested fishes.

The company will be supporting funds, equipment, fingerlings, feed in the first crop. Set up a joint committee between the school and the company, give knowledge on cat fish culturing to the committee and the in charge person before the actual culturing. Once the fish reach the size of 300-400 grams, the school may use the fish for lunch for the underweight for 3-4 days per week, up to 120 days, as per the program of Department of Education. Trial the project in 3 nearby schools. Once achieved, the project can extended to the whole province, with the cooperation with the Department of Education and local government

Reduce the underweight students which will promotes better health and will results in better focus on education. Students can gain knowledge which can apply in household knowledge and future career support. Creates a good relationship between the company and the community and public sectors

MaxWin Cares For All

Perfect Companion Group Co., Ltd.

There was African Horse Sickness(AHS) outbreak during March 2020 in Thailand. This is the first time in Thailand. More than 500 horses have died. The Department of Livestock Development(DLD) has responsibility to prevent and control outbreak, which insufficient resources. Further cooperation and assistance from private sectors are needed to fight the disease. After AHS outbreak under control, it is taking time to reactivate the horse industry. These require dedicated cooperation from all parts.

Supporting and encouragement to DLD to prevention and control AHS outbreak. Supporting the need from anti-venom serum horses, military horses, police horses and horse owners with low income. Helping to good equine welfare, veterinary, horse health care and management knowledge, equestrian sport and re lated communities.

Budget support in AHS Vaccine 4,000 doses to DLD. Assisting vet volunteers to take blood, implant microchip and vaccinate horses in AHS outbreak areas (Ratchaburi, Prachuap Khiri Khan, Saraburi, Bangkok, Nontaburi, Chachoengsao). Donating insect netting to government horse stables such as anti-venom serum horses in Queen Saovabha memorial institute at Prachuap Khiri Khan and military horses in veterinary and remount department at Nakhon Pathom. Giving water springer in order to reduce temperature at Royal Thai army cavalry center at Saraburi.

Project benefits, 4000 horses vaccination.

2. 500 square meters insect netting.

3. Info knowledge given to horse owners during AHS and after outbreak.

Chicken Farm
supplies nutrition for children

C.P Vietnam Corporation

earning while studying

4,000-8,500

baht/person/year

Vietnam is one of the countries which have a problem with nutrition among childhood. There are approximately 1.5 million children under the age of 5 need special care. These problems became the issues for foster home which are under supervision of government or religious organizations such as temples or churches with limited budget and insufficient impact on children's health. Noticing these problems, CP has established the sufficiency nutrition program.

To promote nutrition and good health to children and youth in school age, especially the vulnerable group (disadvantaged children). To support and reduce food costs for taking care of children in orphanages. Promote learning experience for children and youth that can be used for career in future.

Based on a philosophy "Better giving a hook than a fish", the project not only gives them a hook, but also teach them how to fishing. Similarly, C.P will support with chicken coops, food, drugs and vaccines and educate how to grow to achieve efficiency in chicken's production that use in raising children.

The rest are sold to the community and the income will become capital to extend and implement the project in the next generation. Besides, C.P will follow up the expanding results to achieve sustainability and create self-standing projects.

Since 2018, the project has been operated at the Ben Tre Province Orphanage (or Ben Tre SOS Children's Village), the phase 1 is called "Building Awareness", with 1 chicken flock/year. Phase 2_"Project Development", C.P extended to various provinces in the central and northern regions of Vietnam. The current is in phase 3 "Towards Sustainability" CPV is well aware that the success of the project relies on a collaboration between The Nation Fund for Vietnamese Children as a coordination agency between companies and various institutions to develop projects towards sustainability including being a prototype project and expanding to communities.

Project's total expansion: 25 farms throughout Vietnam. Supplement the nutrients from eggs to more than 5,000 children and youth. Production of more than 1,800,000 eggs/flock. Sold to the community 1,000,000 eggs/flock.

CPR for community

Charoen Pokphand Foods Public Company Limited

According to a survey of communities around the farm, lack of knowledge, basic life support, and first aid. Besides, each area lacks volunteer to expand basic life support knowledge networks and first aid to nearby communities.

To provide people around the establishment with basic life support knowledge and first aid. To provide people in the community with knowledge, basic life support skills, and first aid. To create volunteer to continuously expand CPR knowledge to nearby communities.

According to the survey, the communities around the farm lacked knowledge, basic life support skills and first aid. Besides, each area lacks volunteers to expand basic life support knowledge networks and first aid to nearby communities. The company has proposed providing basic lifesaving training programs and first aid to provide people with knowledge, basic life support skills, and first aid, and creating volunteers to expand the basic life support knowledge network and first aid to nearby communities. By coordinating to request a panel of speakers from the Office of Special Projects Management. Schedule and organize such activities at least 2 times/year.

The target group is company employees, farm employees, contact farms, government agencies, citizens, and communities around the farm. Over the past 6 years, the project has been expanded to 10 districts in Nakhon Ratchasima province such as Soeng Sang District, Khonburi District, Chokchai District, Nong Bun Mak District, Pak Thong Chai District, Chakkarat District, Huai Khwang District, Phimai District, NonThai District, Dan Khun Thot, and Pak Chong districts.

Communities around the farm are knowledgeable, skilled and provide effective and timely assistance. In addition, those who have been trained will be happy and proud to have the opportunity to save the lives of the victims, and also to build networks within local communities and communities around the company.

CPF...Growing Happiness, Growing Futures

learning Center by Banmaisamrong school

Charoen Pokphand Foods Public Company Limited

At present, more than 3,000,000 children and youth suffer from malnutrition, divided into 1. More than 2,300,000 malnutrition problems 2. Over-nutritional problems or obesity more than 1,000,000 people. Effects on Children and Youth Because children are a very valuable resource and are of great importance for the future development of the country. Therefore, developing a child to be physically, mentally, emotionally, socially and intellectually ready is an important issue that needs to be solved quickly. To provide quality development of children and meet age-appropriate standards through CPF and Ban Mai Samrong School. To build a good relationship with network partners / project partners. By participating in various activities such as internal sporting events with the school (Don Wua villager, Ban Mai Samrong / Ban Don Wua Learning Center.

In addition to the benefits gained from participating in the project, there are no children suffering from distress problems. To know the rate of children with obesity / obesity from the Thai growth program, therefore, organize internal sports activities. To raise awareness and awareness for children to exercise in order to have good health And it is also a way to burn fat in the body as well. In addition to having agencies / schools / interested people come to study in order to use the knowledge to benefit in generating income. Career built In addition to expanding the results for the university students to learn, study and visit to further enhance their work experience.

3 GOOD HEALTH AND WELL-BEING

Growing Happiness, Growing Futures

Ban Wangyai school

CPF (Thailand) Public Company Limited

From a survey of student health in Ban Wang Yai School, Bo Phloi District, Kanchanaburi Province. With a difference Both economic, social, operational knowledge and budget Causing some students to be physically unhealthy The state of mind is not clear.And also neglected to care about the knowledge of nutrition It is the cause of having to face the problem of malnutrition. Both the lack (thin / short) and the excess (obese), it also affects the performance of students in the school as well.

To promote access to food and nutrition knowledge to students. To provide students in the school The target has the nutritional status according to the criteria. To create a network of cooperation to promote access to food. To create learning resources, access to food in schools and communities.

By participate, Which has coordinated cooperation between networks from the government, private sectors, houses and communities Use of company capabilities Which has diversity in personnel, tools, knowledge and technology Combined with the concept of operations to create sustainability

The project was jointly created. Learning resources within the project such as laying hens, vegetable cultivation, mushroom cultivation, fish farming To be used as an ingredient for lunch Old school children It is a solution to the problem of malnutrition. And also as a learning center Residual output Have been sold through the school cooperative system To bring income to proceed in the next crop.

All students get 100% knowledge of nutrition. Can reduce malnutrition problems From the start of 2015, the amount was 16.2%, down to 3.03% in 2016. Can build a network of 5 camps from the government, private sectors, schools and communities.

Create 10 learning bases within the school, which the school has raised as a model learning center and the national community has more than 255 students access to adequate food since 2015-2020.

Ban Lat Buakhao School, food production according to the economy of sufficiency

Charoen Pokphand Foods Public Company Limited

From a survey of community health : we found Low-nutrition schoolchildren and most of the ingredients for lunch are purchased from outside, resulting in high cost ,the budget for lunch from the government is not enough (20% of secondary school students in years 1-3 not allocate arranged for lunch) ,all children are not eating ,have poor nutrition ,with thinness in schoolchil dren accounted for 15% Korat breeding chicken therefore presented Ban Lat Bua School to CPF project to fix the problem.

To let students to have lunch. To let the students in the school have good nutrition. To expand career results for families, students in the community. To be a learning center for schools in the network

In 2015-2016 school building improvement, creating organic vegetable plots, mushroom-growing houses, laying hens As well as training to pass knowledge to teachers and students in charge of the project.

2017-2018 Training Program Thai School Lunch, bringing the system to improve the lunch menu for In accordance with the Child Nutrition Assessment Program (every semester), students meet the criteria.

2019, participation of the community in developing School is a project learning center 2020, expanding career results for students in 3 households, creating learning resources for additional occupations

Every student has lunch, everyone from 2017-present. The number of students with malnutrition does not exceed 5%. Expanding career results to students' families in 3 communities. More than 3 schools attended to study.

Community drinking water

Charoen Pokphand Foods Public Company Limited

Ban Thamlanglang community faced the problem of unstandard drinking water management and the company had problems with insufficient drinking water supply for consumption. Ordering from drinking water plants far away from the area The delivery is not thorough. Therefore, there was an idea with the community to jointly develop the community drinking water plant. Because machinery and equipment for producing drinking water are still in good condition.

To develop the quality of the people in the community. Make money for the community and self-reliant.

From the aforementioned problems The company helps solve the problem by working in community with the community to improve new drinking water production plants to meet the FDA standard, support equipment. Personnel to audit, audit and improve the drinking water production process Control the water quality to meet the FDA standards, pushing it to become a community drinking water enterprise Causing the community to consume clean drinking water And also able to produce drinking water for sale Create confidence in management The community holds shares in the community drinking water enterprise.

And the company solved the internal problem of insufficient drinking water for employees' consumption by supporting community drinking water for consumption within the company in the near term. Able to improve the quality of life of the people in the community for better sustainability It can be a model to build on to other communities facing the same problem. Ready to be a learning center and a learning base for tourism in the future.

Benefit to the community. Create a career, generate additional income to the community 268,395 baht / year. The community has clean drinking water. Not harmful to health.

The Rehabilitation of Elderly People in Wiang Yong Community by Prosthesis and Orthosis (PO)

CPF (Thailand)Public Company Limited

The population of Wiang Yong Community comprised of 5,481 people and approx. latent population at 3500. There is elderly over 60 yrs. old with society addict at 1,501 people. From long-term screening of health problems in elderly according to the ability to carry out Barthel Activities of Daily Living: ADL found 2 groups need special care and health support (ADL Score <11) ; elderly at home at 76 people and bedridden elderly at 9 people. Promoting elderly at home to maintain self-independence and delay the bedridden state is significant. Elederly group with society addict are able to create Prosthesis and Orthosis. (PO)

From the group discussion with CPF network, District Health Promoting Hospital, Physical therapist, District Public Health officer, District Social Development Officer, Chair of Elderly club found the prevention by encouraging the elderly at home to maintain self-independence and delay the bedridden state is significant.

To create model of PO to support hand muscles and flexibility, 30 each,4 Physical Manuals from the physical therapist. To recycle the waste materials. To establish PO course in the elderly school

Build a Toilet for Children

C.P. Cambodia Co., Ltd.

In the past, the school toilets in the countryside are not very pleasant. Our company, CP Cambodia Co., Ltd; therefore, went to the area to survey in rural schools, started from the provincial area where the company was operating. We found that the school toilet was not enough and the existing one was not hygienic. Whereas hygiene is the basis for a good life and should be free from various diseases.

To provide schools with hygienic toilets and create awareness of hygiene, create unity and good cooperation between the company, school and the community.

After visiting the survey area, the image was presented to the company management to find solutions and help schools in rural areas to have adequate toilets for their children. The management team agreed that the community should participate in the implementation of this project and therefore seek cooperation with the people and farmers who operate in the said community area together with the company to support the budget for improving, developing and building a toilet. The construction team of the company is the designer of the building structure and built by contractors around the community to generate income for the people in the community in another way.

Schools in rural areas Having adequate and hygienic toilets has a better quality of life. Establish discipline and hygiene habits. Create unity and cooperation, de velop, create public treasures for the school, create good relations between the company, school and the community.

Generate more income for the community

120,000/year

Farmers of Ban Lao Su, his main occupation is in the cultivation of Arabica coffee for more than 8 years, but there is a certain marketing problem. Therefore thinking of quitting planting and turning to other occupations. Which if the coffee growing area is reduced The forest area is reduced as well.

Thus leading to the solution of the problem to raise farmers to be Knowledge of coffee businessman, provide management of raw materials throughout the supply chain. And support the conservation of natural resources in the area mutually.

Enhance the knowledge of farmers. In the process of managing coffee throughout the supply chain. Promote job creation, build a career in the community.

To create strong intensity for the community by establishing the Ban Lao Su Coffee Growers Community Enterprise Group.

Develop knowledge of farmers. Dealing with technology in the coffee process throughout the supply chain. Promote self-improvement and development such as Bringing coffee to the contest, Creating a roasted coffee brand Community products were born. Guidance on access to finance for business development.

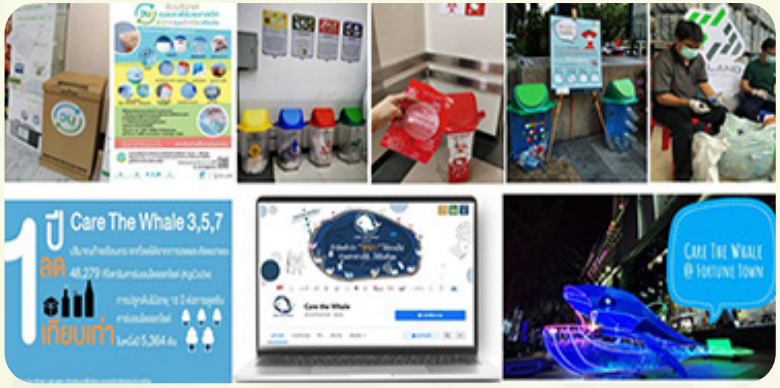

Raise the community by establishing the Lao Su Coffee Growers Community Enterprise.

Farmers have knowledge of coffee management processes throughout the supply chain. Create jobs, create careers for people in the community, generate income over 120,000 / year. Establishing cooperation among network partners in the community enterprise development area.

Care The Whale

C.P. Land Public Company Limited

The Climate problem. Fortune Town The source of the waste 1-2 tons of organic waste per month, the beginning of the 2010 project is the bio-fermented water project from food waste. CP Innovation2013 has been continuously implemented in waste management and environment. Spark, together with the SET created the project, a joint project in the social sector, busi ness and government sectors to solve environmental problems in Ratchadapisek Rd. joint project to"Invisible Waste."

To help global warming reduction with waste and building environment management. To cooperate with business sector along Ratchadaphisek Road in waste management from the origins. To create the cooperation, communication, knowledge sharing, and system waste management with 3R concept(Reduce,Reuse,Recycle) such as producing Bio-fermented EM water and fertilizer from food waste, preparing separate trash for cleaning staff to separate, at the end, into 3 categories:1) recycle waste like paper,box,glass or plastic bottle for sales 2) waste to dispose which are 2.1) general waste such as dirty snack bag, plastic bag, foam, foil 2.2) hazardous waste such as disable incandescent, neon or battery, infectious waste, face mask 3)separation: food waste to ferment EM water and fertilizer for the Fortune Farm Vegetable Growing project; Fortune Town Say No to Plastic Bag project to reduce using plastic bag; Producing Buddhist monk's suit project from recycle PET bottle mixed with cotton; WON project.Most important process is the data processing by WhaleCalculator system and campaign the environment saving throughout by Whale sculpture in front of buildings and via www.facebook.com/carethewhale.

Social impact of Zero Waste to Landfill – reducing 48,279 KgCO2e GHG from waste reduction and separation per year which is equivalent to CO2 absorption by growing up 5,364 ten-year trees per year.

CPF Grow Share Protect

Mangrove Forest for Samutsakhon Province

Charoen Pokphand Foods Public Company Limited

In the past, western part of Mahachai estuary is covered by about 3,000 rai of mangrove forest. Until 2014, before the project started, it was reduced to 500 rai due to natural disasters. Problems of coastal erosion from global warming and community expansion led to destruction of the mangrove forest. Communities are impacted, especially those who work in coastal fisheries. Due to a decrease in the number of aquatic animals, led to the decreasing of income and emigration.

To restore the mangrove forest back to life. To create a network of cooperation within community. To be a learning center devoted to mangrove forests. To create a place of ecotourism and local lifestyle-themed tourism. To increase biodiversity and contribute to the reduction of global warming.

This project is operates with an emphasis on participation of 3 sectors, including government, private and community sectors, using the potential of each sector to develop sustainably. In the past, the community and various agencies are unable to overcome this challenge due to lack of necessity knowledges that suit the area. The key problem is lacks of mediator to create a network of working groups, as well as lack of budget for long-term operations.

The working group has collaborated with the community, government agencies and established a network of working groups, namely "Mangrove Forest Conservation Community Committee" to jointly operate by using knowledges based on academic principles and local wisdom through a collaborative learning process, creating an usable knowledge to increase the area of mangrove forest to 104 rai, which is the principle of "3 dares". It also assists the community by providing job training, organize a field study and improving labor skill. Led to local lifestyle-themed tourism, creating various local products and established a community fund for the conservation and sustainable care of forest in the future.

Mangrove forest area is increased by 104 rai and 266 rai more is in process. A network of working groups is established for mangrove forest conservation. The community become a learning center devoted to mangrove forest. Create an ecotourism and local lifestyle-themed tourism. There is an increase in biodiversity, contributes to increasing of income due to increase of the number and species of aquatic life. Reducing global warming from increased forest carbon sequestration.

Mangrove planting Pak Nam
Prasae Sub-District Community Lifestyle

Charoen Pokphand Foods Public Company Limited

Income from coastal fishing
1.98 million bath./year

2018-2020 Income Form tourist
2 million bath./year

30 years ago, the coastal area of Pak Nam Prasae Subdistrict, Klaeng District, Rayong Province had fertile mangrove forests. Aquatic animals are also abundant. But in the aftermath of various developments come into the community Whether it is the industrial sector, agricultural sector, including cutting mangroves to burn charcoal for sale. As a result, mangrove forests are rapidly decreasing. Affects coastal ecosystems, decreased aquatic life, causing coastal erosion problems. and the problem of marine waste.

For the villagers in the community to participate in the conservation and restoration of mangrove forests. Have a conscience to protect and cherish the mangrove forest Realize the value of mangrove forests by linking mangrove forests to ecotourism and culture for the villagers in the community to have a career Sustainable income and self-reliance. In 2014, CPF carried out the CPF Plant, Share and Protect Mangrove Forest project in Pak Nam Prasae Subdistrict, Klaeng District, Rayong Province by working with the government agencies, local governments, the people's sector, and academics. In the implementation of the project, CPF has joined the dialogue with the stakeholders. to know the real problem lead to project planning and has planted more mangrove forests in the area of 54 rai (currently with a survival rate of 80%) and participated in the conservation and restoration of mangrove forests in the area of 614 rai. It builds connections and builds on to create ecotourism and culture. To make people in the community realize the value of mangrove forests and take part in the implementation of ecotourism activities It is registered as a community enterprise. Establish a fund to preserve the environment and promote the occupation of people in the community.

As a result of mangrove planting, the villagers have increased income from coastal fisheries before the project implementation Pak Nam Prasae Sub-District Community Lifestyle Tourism Enterprise has income from receiving tourists more than 2,000,000 baht, currently has a total fund of 342,431 baht

Let's save the green world together

C.P Vietnam Corporation

Today, the global climate has changed a lot more, which has severely affected Vietnam, a developing country. Every year in the Central of Vietnam, there has been natural disasters, including storms, landslides, etc. It has caused severe damage to people and property, which made mankind aware the importance of forests that tree planting forests help protect living things on this planet.

Cooperate with the government to promote and provide forests knowledge such as Mangrove forest for internal and external employees. Conduct business with social and environmental responsibility. Support tree planting goals towards the Carbon Neutral Targets by 2030.

CPV targets planting 1.5 million trees both inside and outside business by 2025

The project process will start from the forest area survey. Planning with local authorities and related parties. Implementing and continuing building on the project.

The project started in 2018 in collaboration with the Forest Conservation Center at Can Gio, an important green lung and close to the CP headquarters area. This is the pilot area of the project

After that, the projects were expanded by cooper ating with various branches of the company and be a part of conducting business with social and environmental responsibility.

Promote knowledge about the importance of mangrove and protected forests to ecosystems to 100% of employees and the university student community of 400. Currently, there are 420,189 trees, both inside and outside, adding Green space up to 4,470 Rai .

Expand partners to join the project both executives, company's employees, whether they are public or private NGOs, communities, areas and university students

The miracle of fermentation tanks to save the soil

Charoen Pokphand Foods Public Company Limited

The hatchery has a waste management system. When sorting all types of waste, the problems found are organic waste such as food waste, vegetable scraps, shrimp stains. Fresh food scraps from shrimp breeders, being managed in part, are used to make marinades. And part of it is organic waste The problem is Smelly Is a source of germs A complaint has been addressed to an unlikely environment in the company. To Reduce the amount of organic waste, bad smell, and Protect the environment.

Project implementation by implementing the strategy "4 Merge for Sustainability." Tick + think + join + (network) "of the company Become a guideline for CSR from experts, knowledge skills, ideas in gathering knowledge, sharing knowledge with the guru, stakeholder, internal agency (CPF), organization network, extending knowledge to the community. this started with training to enhance knowledge on waste management, practice training skills, follow up, measure results, personnel, practice results, expand results, reduce waste, reduce odor, reduce volumes of environmental waste, to be utilized as fertilizer by using plastic buckets that Not used and recycled Make a compost bin to protect the soil

Benefit to the community

- Expanded development to be a learning exchange center for the community, providing a learning base for "waste management" for interested people (communities, schools, business establishments and tourists).
- Tourism community enterprises Have income from distribution "Soil conservation fermentation tank"

Benefits for the environment

- Reduce the amount of organic waste 100%
- Reduce bad smell from organic waste 100%
- Better soil ecosystem Protect the environment

Lets save the world by reusing, reducing and recycling

C.P Vietnam Corporation

With a population of 94 million, Vietnam emits about 18,000 tonnes of plastic waste per day, and is ranked 4 out of 5 in the world to emit plastic waste into the sea. In the meantime Vietnam is faced with a huge amount of waste, but its management, disposal or reuse capacity is limited.

Government places great emphasis on solving this problem and sends letters to all departments, organizations and companies seeking cooperation in the campaign. Promote everyone to join in reducing plastic waste.

To raise awareness on waste reduction for company's employees, family, youth and community. Campaign for everyone to practice reducing single-use plastics. Strengthen recycling and reuse. Recycled including basic garbage classification. To store, classify waste in the office, factory, residential area.

The working team has coordinated and then collaborated with all branches to hold meetings and organiz activities, campaign to reduce plastic waste and build awareness of waste reduction. It also held a meeting with affiliated companies operating in Vietnam to share knowledge and exchange plastic waste reduction practices.

Besides, projects have collaborated with social organizations to organize waste collecting activities and campaign to reduce littering for employees, companies and local communities. The project has organized various activities such as Workshop, Teambuilding, Recycling Competition, Exhibition to raise awareness on waste reduction and together take care of the environment.

For project development and expansion, we will organize plastic waste sorting activities within the company and expand it to the community in the future.

Organized a garbage collection campaign around the community near 26 points (16 provinces) nationwide and collect waste together with an NGO in both Ho Chi Minh City and 3 tourist beaches with more than 2,200 participants. Currently, the company has stopped using plastic water bottles in meeting rooms, thus saving 240,600 plastic water bottles (compared to 2018) Promoting project by creating a green workspace from the recycling of the remaining materials

No more Single Use Plastic

CP ALL Public Company Limited

Single-use plastics: Single-use plastics is a plastic that is used for facilitate to customers in short time, but it takes longer time to degrade, such as plastic bags from convenience stores, plastic straws, plastic dishes, plastic food containers, plastic spoons and forks with a period of use for just one meal, water mugs and coffee mugs are the ones that use the most plasticmaterial because coffee mugs consist of plastic straws, plastic lids, plastic cups. This is not yet combined with the store that has a second layer of plastic bags, which means that there are three-four pieces of plastics.

Campaign to reduce the single-use plastics from all 7-11 stores nationwide. 7-11 branchesat each area would be as a representative of all communities, society and the country, a role model of reduce and quit of single used plastics. Eliminate amount of plastics waste that takes time to decompose and cause of global warming. Enhancing the country for an excellent environment and sustainability.

Reduction and replacement

1. "Bring glasses with a special price" project is to campaign and motivate customers to bring their glasses forbuying a drinks at 7-11 stores and will get 2 baht for discount.
2. "No Cup Button" project is to campaignand motivate for "green customers" to bring their glasses forbuying a drinks at 7-11 stores with regular prices.
3. "Green packaging" project is a changed of plastic packaging to be an eco-friendly packaging (PBS coated paper cups / paper covered plastic straws / drinking dams / paper bags / coffee sticks / PLA straws) at participating 7-11 branches.
4. "No utensils but request" project, whereby store does not distribute utensils, will be given when the customer requests.
5. "Selling tubes" trial project with Thammasat University (Rangsit Center), is to sell tubes to students who acquire to use them.
6. "Save the world, just raise to drinks" campaign that encouragesand motivate customers to reduce plastic straws, to drinks without straws, and coffee drinks is to use drinking dams instead of straws.

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

Sop Khun Model

Charoen Pokphand Group Co., Ltd.

generate income for the farmers
500,000 Bath/year
recover the forest **1,998** rai

From the watershed forest problem in Nan province, the natural resources and environment were worsened. More than 1.5 million rai of forest has been transformed into a plantation area. From going into the survey area, it was found that Sop Khun Village, 314 houses with an area of 42,000 rai of bald mountains, affecting both forest fires, smog, poverty, insufficient income and expenses. Health problems from the use of chemicals Lack of access to alternative occupations, leading to the creation of a model for forest restoration and improvement of the quality of life in the area.

Create a model area, sop of cloud model (revive the forest Improve the quality of life To a sustainable community. Promote the conservation of natural resources and the environment. Solve the problem of bald mountain from monoculture (corn), creating economic forests and restoring mixed forests to replace old occupations. Promote grouping for the communities to manage themselves

The main ideas for solving the problem are: 1. Market leading production 2. Model of coffee to create a forest. 3.High value crops

Charoen Pokphand Group Recognize the importance and strive to solve problems Therefore, it supports the limitations of agriculture, such as capital, knowledge, management, technology and markets, as well as sending officers to the area. To give advice Developing a new generation in the area In order to be the management of the future Including linking the market in the purchase of produce

At present, we have opened a processing factory to purchase cherry coffee products. Managed by community enterprises Able to create jobs and generate sustainable income Coupled with forest restoration Under the forest building project to generate income.

Reduce 48% of the single-planted area, 1,998 rai of forest is returned from coffee plantings. Project area Can store 5,059 tons of carbon equivalent carbon dioxide. (TGO) Make money for coffee farmer 707,863 baht. There was hiring for community development in the area. Who will continue to drive the area in the future. There was a community enterprise, creating a forest, generating income at Ban Sop Khun. There was an integration of development work in the Ban Sop Khun area.
